

THE LCM TOWER · $\ell=0$

• dark

$N=12 \cdot \tau=6 \cdot 6/12 \text{ active} \cdot \xi(m) = 137/((m-1)^2+16)$

Host: $d = 12/\gcd(m, 12)$ · Mirrors: $m + m' = 12$ · Axis-agnostic (IC-110)

CASCADE POSITION SEQUENCES – $k_n = (g \cdot n) \bmod 12$

Each generator traverses a DIFFERENT path through ALL 12 harmonic families. Position k = family m .

NON-TRIVIAL PAIR (5, 7)

$g=7$ fifths

$g=5$ fourths

TRIVIAL PAIR (1, 11)

$g=1$ fwd
